COLUMBIA

AI Cybersecurity and Governance

Dr. Neil Daswani

Cybersecurity Executive, Investor, and Author
Executive-in-Residence, Columbia Engineering

Course Introduction

Outline

01 Cybersecurity Primer

02 AI Primer

03 Multimodal GenAI Risks

04 Agentic AI Risks

05 Breaches on and with AI

06 AI Governance and Regulation

My Perspective on AI and Cyber Risks

Past:

We were living in an age of **Big Breaches** prior to Generative AI

Present:

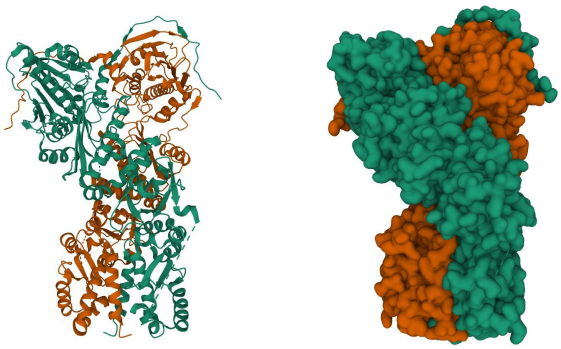

Generative AI and **Agentic AI** significantly expanded **attack surface**

Future:

Chief AI Officers and Chief Information Security Officers must **collaborate** aggressively

AI Leadership & Innovation

Google DeepMind AlphaFold has predicted the 3D structures of over 200 million proteins which will aid in drug discovery.

Claude Mythos has autonomously discovered and exploited thousands of zero-day vulnerabilities across major operating systems and browsers.

COLUMBIA

"The companies and countries that **treat AI security as an afterthought** are **not moving faster**. They are moving faster toward the moment when they will have to slam the brakes aggressively."

- Neil Daswani (AI Attacks)

COLUMBIA

Course Learning Objectives

By the end of this course, you will be able to:

- Identify the **root causes of major historical breaches**
- Describe the **expanded attack surface** of Generative and Agentic AI
- Analyze **real-world AI-specific attacks** that can impact AI systems your organization would like to release or has released
- Evaluate leading **AI governance frameworks** and **regulatory mandates**
- Apply a decision-ready lens to **AI risk management**
